

Nick Sullivan Molina is a MSc. student in the Materials and Mining Engineering Department at McGill University. He is currently researching automation components in Scanning Probe Microscopy (SPM), particularly toward developing components that are generalizable and reusable in a wide range of experiments. Prior to beginning work in SPM, he worked in industry on problems intersecting computer vision and human-computer interaction, holding positions at Lattice Semiconductor, Mirametrix (acquired by Lattice), and Kitware. He received a BSc. in Computer Engineering from Tufts University in 2011.
