Ruben Perez is a Full Professor at the Universidad Autonoma de Madrid (UAM) and the Director of the Condensed Matter Physics Center (IFIMAC) at UAM, a “Maria de Maeztu” research unit of excellence. He graduated in Theoretical Physics at the Universidad Complutense de Madrid in 1987 and got his Ph.D. from UAM in 1992. After a three-year postdoctoral stay at the Cavendish Laboratory, University of Cambridge, as a Marie Curie Fellow and Research Associate, he returned to UAM, where he leads the Scanning Probe Microscopy Theory and Nanomechanics (SPMTH) Group. His research has focused on the theoretical analysis of probe-based experimental techniques such as scanning tunneling microscopy (STM) and atomic force microscopy (AFM), and their application to carbon nanostructures (fullerenes, nanotubes, graphene), oxides for catalysis and energy capture, and the study of the mechanical and frictional properties of biomolecules (Proteins, DNA, RNA) in their native liquid environment.
